INFORMAL DINNER IS SERVED.
Come for the pizza and stay for personal growth!

Fast Facts:

Over 70% of the children that are in the foster care system are affected by alcohol and/or drugs. Many drug and alcohol affected children go unidentified or are misdiagnosed. Behavioral problems caused by brain damage due to prenatal exposure is mistakenly thought to be solely a result of difficulties in the child's home environment.

Making A Difference Association is a non-profit organization and is affiliated with the California State Foster Parents Association.

We believe that it is important to educate, support and advocate for children and their caregivers.
